

Peri-Implantitis Treatment

Weakened periodontium can provoke an infection-prone environment involving dental implants and result in implant failures & bone damage

Pinhole Rejuvenation Gum Treatment

A scalpel-free, suture-free alternative to conventional gum grafting procedures for correcting gum recession & thin tissue phenotype

Surgically Facilitated Orthodontics (PAOO)

Teeth move much slower & often hindered once the bone is mature. This is why adult orthodontic treatment can be lengthy & left incomplete

Dental Implant Placement

Do you have one or more missing teeth? Implants can provide a fixed solution for a missing space & compensate for the look, symmetry, feel and function of natural teeth

Sinus Lift / Augmentation

The upper back jaw often present insufficient bone and close proximity to the sinus. Sinus lift can raise the sinus floor and develop bone for the placement of implants

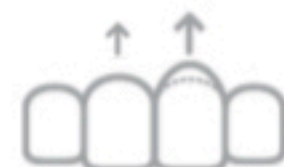

Root Resective Treatment

If non-resolvable problem like fracture occurs in a root of posterior teeth, we can resect the problematic area while leaving healthy ones intact without having to remove the whole tooth

Digital Smile Design Aesthetic Enhancement

Explore your smile potential through creating a visual simulation of a potential treatment outcome

Crown Lengthening / Gum Recontouring

If there is not sufficient tooth structure for a restoration, or esthetically compromised, a plastic recontouring might be necessary

TREATMENTS

WHAT WE OFFER

Impacted Canine Exposure

When a canine tooth cannot emerge into the dental arch, an expose and bond procedure can be used to help this important tooth emerge successfully

Bone Augmentation

Dental Implants & dentures to replace missing teeth need adequate supporting bone structures to function properly

Preservative Dental Extraction

Before you opt to extract teeth, please consult with us to see if preservation of surrounding tissue architecture is possible to minimize the site collapse

Periodontal Disease Treatment

Chronic inflammation burden and adaptive immunity can trigger both localized and systemic complications in linings of many organ systems

Laser-Assisted Regeneration LANAP/LAPIP

Damaged oral structures and lost functions can be regained via selective laser targeting of disease-related tissues while promoting regeneration

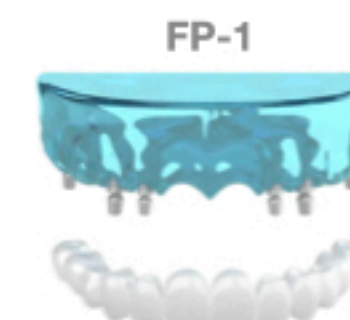

Gingival Augmentation

A micro-surgical gum grafting approach can regain thick, functional, & healthy intra-oral skin back with a smaller incision, less blood and quicker healing

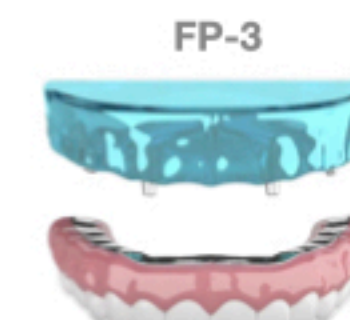

Teeth Cleaning Laser Debridement

Local / systemic irritation can cause inflammation-prone oral environment leading to bleeding, tender gums, bone loss, or loose teeth

Full Arch Implant Bridges

Implant supported full arch solution utilizing patient's own gum and supporting bone infrastructures, natural and easy to clean

All-on-X Treatment

Provide a more fixed full arch solution than a denture for people who already missing significant portion of supporting bones and teeth

Implant Overdenture

More secure than a removable denture. Standard dentures rest on your gums. Many people complain that the dentures slip or come loose
